

I enjoy XM Radio programs and am thrilled they are beginning to offer local content in some cities. I look forward to local content for the OKC area whenever it is planned. I feel local broadcasters and NAB's position to prevent XM radio from competing by providing local content is not in the public's interest. They should be more concerned in providing content the public wants to listen to, as well. Satellite radio competes with them at a disadvantage since they are dependent on subscribers for their audience. Local radio stations have a broader local audience, they just don't appeal to them like they should. Let the marketplace decide, not special interest legislation. Please support XM's bid to provide programming desired by it's customers, and reject the NAB's petition 04-160. Thanks.
